

## **Lous Richstein - Virtual Booth Visit: Kuraray Panavia V5**

Dr. O'Keefe: Join me as I walk around the exhibit floor. My next visit is to the Kuraray to see what's new and exciting at that booth here at the Greater New York Meeting.

Dr. O'Keefe: Lois Richstein of Kuraray, what's new and exciting that you want to talk to us about here at your booth at the Greater New York meeting?

Lois Richstein: One of our newest and latest products is Panavia V5. Panavia V5 is our newest adhesive resin cement in the Panavia family that we're proud to launch.

Dr. O'Keefe: So, let's go have a look at the product.

Lois Richstein: Sure. Let's take a look at the components that are part of the V5 set. Welcome to Kuraray Noritake Dental Inc. newest dental cement. It's called Panavia V5. It is the fifth version in the Panavia family and we're proud to feature it at the Greater New York dental meeting. What's unique about Panavia V5 is it has a one bottle tooth primer that is applied to the tooth structure and it's only air blown, but yet gives you the same performance factor. That's our gold standard product bond, which is a light cure bond. This is a revolutionary step for Kuraray. We have a one bottle pre-treatment for the internal surface of the restoration that can be used on both ceramic as well as metal.

Lois Richstein: We call that bottle Clearfill Ceramic Primer Plus, which just requires an air blow. The cement itself, it [has] fluoride released and dual cure, so it's very easy to work with. It mixes through a mixing tube and it does have power responding, trying paste, so that if you would like to evaluate the shade prior to cementation, you have the opportunity to do that. We offer five shades, including a clear shade, because this product can also be used for veneers, so this is considered the workhorse product in our cement family, it can be used for all crown, bridge, inlay, onlay [inaudible] including veneer, and we hope you enjoy using it.

Dr. O'Keefe: Lois, what are the advantages of this product over others?

Lois Richstein: Well, there are a number of advantages of using Panavia V5. One is the reputation associated with the Panavia name. Many people trust the Panavia name and know the success and performance factor that they have with it. The second advantage would be that this product contains the original MDP formulation. That's what sets Kuraray products support from all of our competitors.

Dr. O'Keefe: How do I learn more? Where can I get the product?

Keeping Canadian Dentists Informed

Lois Richstein: To learn more about panavia V5, people can visit our website which is [kuraraydental.com](http://kuraraydental.com). The product is available through distribution in both Canada and the U. S.

Dr. O'Keefe: Lois, thank you very much for this conversation.

Lois Richstein: My pleasure.
